### **Description**

Read counts per miRNA for the microRNAome collection of RNA-Seq experiments

### **Usage**

```
data("microRNAome")
```

### **Format**

SummarizedExperiment

### **Details**

New small RNA-seq data from 39 primary cells obtained by culture, flow cytometry or centrifugation were augmented with Sequence Read Archive (SRA) small RNA-seq read data from 496 samples with over 1 million microRNA reads, and the data from FANTOM5 and the Hemmrich-Stanisak lab. All samples were processed through miRge (Baras et al. 2015), which uses modified microRNA libraries and multiple Bowtie steps for optimal alignments on multiplexed runs.
